# INTRODUCTION

Elunium Coin is a decentralized, peer-to-peer transactional, community-oriented cryptocurrency. ELUNIUM is designed to be sustainable, with realistic returns on investments for our community with our approach on the proof-of-stake and master node consensus. Elunium is built on the Bitcoin codebase and Masternode integration will be done via the DASH codebase, striving to become the premier cryptocurrency by implementing the best aspects of current blockchain technology. Our diverse community is key in achieving our goals.

Elunium is an innovative cryptocurrency operating on its own technology with the vision to reduce the costs of the transaction. With a transaction time less than 500 ms and 100,000 transaction processing capacity simultaneously, making it an instant transaction time, this makes Elunium the fastest cryptocurrency in the world.

# ELUNIUM COIN FEATURES

## SPEED

Having a fast transaction confirmation time is important. Users want to see their coins travel across the globe instantly. Since Masternodes scale in a linear way, our network has the potential to support many thousands of transactions per second. Instead of performing useless computations to mine the next block, Masternodes use transaction locking and consensus[5] to maximize the use of every watt of electricity to enhance the speed and security of the network. The result is a nearly instantaneous transaction system that does not rely on a centralized authority.

"Virtual Currencies may hold long-term promise, particularly if the innovations promote a faster, more secure and more efficient payment system." - Ben Bernanke[6], Congress address. Elunium will challenge the status quo of big payment processors in the competitive market of online and offline transactions.

## LOW FEES

We believe in the original vision: a cryptocurrency should perform well for all use cases. We want it to be fast, user-friendly, practical, and above all, carry a low transaction cost. We need to be able to do micro-payments of a cent and big payments all the same. A study from 2011[7] asserts that the cost and inconveniences associated with a payment method discourage its use in online transactions.

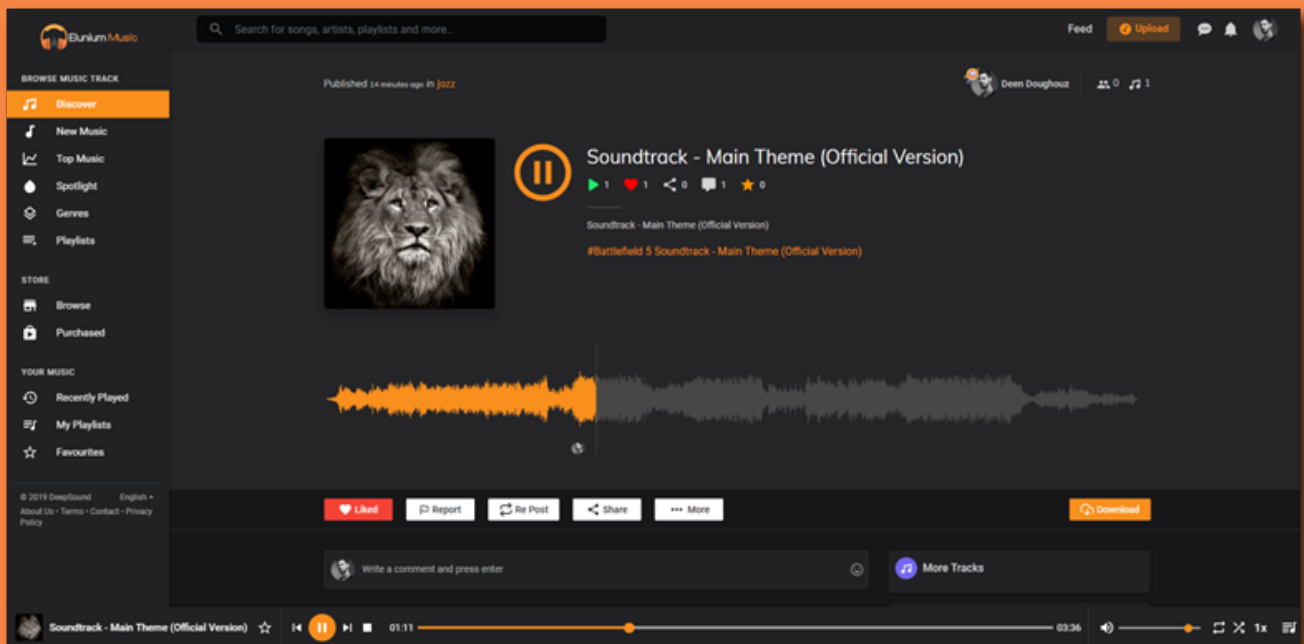

## PRIVACY

Privacy, both financial and personal, is a key component of life in a free society. Individuals need to have a private sphere free of government involvement, surveillance, and control. Financial privacy is essential because it can be the difference between survival and systematic suppression of opposition groups by authoritarian governments.[9] Financial privacy allows people to protect their life savings when a third party tries to confiscate their wealth, whether for political, ethnic, religious or "merely" economic reasons. Businesses need to protect their private financial information, intellectual property, and trade secrets from competitors in order to remain profitable. 'Privacy is not something that I'm merely entitled to, it's an absolute prerequisite.' - Marlon Brando

Elunium vows to employ many modern, tested and verified techniques to respect the privacy of its community members. By incentivizing Masternodes we provide an off-chain path for completely private transactions. Community members can also utilize coin mixing technology to further ensure the anonymity of their transactions.
